# John M. Coyne Recreation Center Improvements Project

**November 2026**

## Project Update

Throughout October, construction activities advanced across several key areas, with significant progress made on structural steel, interior finishes, and building foundations.

Work completed during September included:

- Steel has been erected, placed, and inspected in the cardio and team rooms.
- Completed installing roof curbs in the North locker room and mechanical room.
- Completed installing shower valves in the locker rooms.
- Ductwork, gas line, and drywall installation is ongoing throughout the project.
- Work has begun on concrete footers and elevators.
- Painters completed block filler on block walls, have moved onto painting interior and exterior columns.
- Completed pressure washing and glass cleaning in the pool area.
- Masonry block wall installation has begun in the equipment and storage areas.

Looking ahead, next month's priorities include advancing structural steel and elevator shaft work at the main entrance, installing flooring, tile, and ceilings in the locker room areas, and beginning to install tile and ductwork in the pool area.
